

VILLAGE CATERING

Investor: XXXXXXXX Project Location: Serbia

Currency: RSD

Date Activity: 21.03.2022

Description and Goal of the Investment

There are more and more elderly households in the villages, who due to illness cannot go to the shops to buy groceries for food preparation, and most of them are not even physically able to prepare food. The idea is for a younger resident of the village to form a family business, in which, for example, female members would prepare food and male family members would distribute it around the village in a container with partitions (they can be bought in supermarkets). There would be more types of food on the menu every day, and each time they brought portions, the delivery people would note something from the planned menu for the next day, so that the cooks would have time to prepare portions for the next day. For example, a bowl may contain: a partition for soup, a partition with a main dish (for example a steak with potatoes) and partitions with salad, fruit and cake. Projected capacity: Delivery of 30 meals a day. Arrangement of the kitchen and purchase of quality productive stove, refrigerator, dishwasher, sherpa, pots and cutlery 320,000 dinars, hygienic clothes for cooks 3 x 15,000 dinars, dishes with bulkheads 70 pieces x 700 dinars / piece = 49,000 dinars, 2 bicycles with baskets 30,000 dinars, sanitary permit 4,000 dinars. Planned training for a cook due to certification. The investment is acceptable for realization, because in addition to employment, all 4 family members will have a total gross income of around 160,000 dinars / year, and in addition, the company will realize an average annual net profit of around 46,000 dinars. Due to the establishment of production in 1 year, it will realize a small loss on the financial flow, which will have to be compensated by additional investment. In general, if real prices are included in the project, the investment is acceptable for realization.

Note

From the future accumulation, the program automatically included in the projections the replacement of fixed assets with a shorter lifespan than the project life Residual (residual value of the project) after the project life is not calculated in the last year of the project life because the market value of fixed assets after the end of the project life cannot be realistically estimated, and can significantly affect the financial effects.

SWOT	A no	waia
SVVUI	Anai	IVSIS

Strength

Your strengths can be qualified staff, team, experience, available resources (technological equipment, raw material base), market position, innovative products, investment and creditworthiness.

Weaknesses

Poor creditworthiness, lack of team, experience, qualified staff, creditworthiness, ie. financial resources (especially for beginners in business), inflexibility (poor adaptation to market changes), poor financial analysis to prove the profitability of the idea and attract co-investors...

Opportunity

Innovative product, developed more advanced technology, profitability of the idea, favorable market situation, ie. favorable economic-socio-political environment,...

Threats

Unfavorable economic, socio-political environment, lack of state incentives and favorable loans, especially for business start-ups, strong competition in the planned activity, strong competition that quickly develops more innovative products.

You can download the current Rating via the link https://nbs.rs/sr/finansijsko_trziste/informacije-za- investitore-i-analiticare/rejtng_RS/. Attached is the latest rating rating from STANDARD & POOR'S, MOODY'S INVESTORS SERVICE and RATING FITCH. It is important if foreign investments or foreign investors are planned. More in the blog https://investasistent.com/investiciona-i-kreditna- sposobnost-investitora/

Note

An investment is eligible for realization if all indicators in the Financial Result have recommended values, if the SWOT analysis is realistic (more in the blog SWOT Analysis) and if the investment and creditworthiness is realistically assessed and accepted by a potential lender or co-investor (more in the blog Investment and Investor Creditworthiness). The key parameters on the basis of which it is concluded whether the investment is financially justified are: NPV (Net present value), which must be positive, and shows how much the investor will earn in the project life at current prices, IRR (internal rate of return) which is an indicator of interest invested capital, which in the basic variant must be at least 2 times higher than the discount rate, Discounted return on investment, which must be shorter than the life of the project, Average annual Net profit min 15-20% of average income. If the budget shows a loss on the Income Statement and / or illiquidity in the Financial Flow (often occurs in the first years of the project life if production is gradually established and / or due to the need to conquer the market, due to employee salaries, depreciation and due loan installments), and other above parameters are good, does not mean that you should give up the investment, but indicate that in those years it is necessary to invest additional external funds to maintain liquidity.

Disclaimer

We did not check the reliability of the input data (investment value, income and expenses, SWOT analysis), as well as investment and creditworthiness. Therefore, before starting the investment, all entered data should be checked again, especially the procurement and sales market.
