

INSTALLATION OF SOLAR COLLECTORS ON THE HOUSE

Investor: XXXXXXXXX Project Location: Serbia

Currency: RSD

Date Activity: 21.03.2022

Description and Goal of the Investment

In the summer months (7 months) the household consumes an average of 340 kWh per month, ie consumes 2,380 kWh per 7 months and pays 12,733 dinars for it, and in the winter months (5 months) consumes an average of 1,340 kWh per month, ie consumes 6,700 kWh in 5 months. pays 63,663 dinars, which means that the annual cost of the household for electricity is 14,409 + 63,663 = 78,072 RSD / year In order to save costs for electricity, the household intends to install solar collectors with a power of 5 kW (15 panels), and the offered price of the company that deals with the installation of solar plants is 7,000 EUR, ie. 826,000 dinars Solar collectors produce 500 kWh per month in summer and about 400 kWh per month in winter. Considering that solar collectors produce a total of 500 x 7 = 3,500 kWh in 7 summer months, and the household consumes a total of about 2,380 kWh in that period, according to the Law on Energy and the Contract with EPS, the household will have surplus energy in the amount of 3,500-2,380 = 1,120 sell kWh to EPS at a feed-in tariff at a price of 20.06 RSD / kWh and thus generate revenue of 1,120 x 20.06 = 22,467 RSD per year. In the winter, the household will not have surplus energy to supply EPS from solar collectors, because it consumes 1,340 kWh per month, and solar production produces 400 kWh, but will reduce the takeover of energy from EPS to 1340 -400 = 960 kWh per month (8,773 dinars) , ie 43,866 dinars per year Therefore, by investing 826,000 dinars in solar collectors, the household will realize annual savings in the amount of 22,467 dinars based on the sale of surplus electricity at feed-in tariffs + 43,866 dinars based on reduced takeovers from EPS at regular tariffs, a total of 66,333 dinars The budget includes non-refundable incentive funds in the amount of 50% of the investment of 413,000 dinars. The investment is worthwhile for the realization with the non-refundable funds (Time of return 7 years), but without the non-refundable funds it is on the verge of payback (Time of return 15

Note

From the future accumulation, the program automatically included in the projections the replacement of fixed assets with a shorter lifespan than the project life Residual (residual value of the project) after the project life is not calculated in the last year of the project life because the market value of fixed assets after the end of the project life cannot be realistically estimated, and can significantly affect the financial effects.

Financial results of the investment	
Parameter	Amount
Investment	831.528 RSD
Average Income	79.981 RSD
Average Net profit	41.096 RSD
∑ Net profit / Investment	0,74
Liquidity in all years	Yes
Average Net profit / Average Income	51,38 %
NPV (net present value)	369.961 RSD
IRR (internal rate of return)	14,24 %

SWOT Analysis	
---------------	--

Strength

Your strengths can be qualified staff, team, experience, available resources (technological equipment, raw material base), market position, innovative products, investment and creditworthiness.

Weaknesses

Poor creditworthiness, lack of team, experience, qualified staff, creditworthiness, ie. financial resources (especially for beginners in business), inflexibility (poor adaptation to market changes), poor financial analysis to prove the profitability of the idea and attract co-

Opportunity

Innovative product, developed more advanced technology, profitability of the idea, favorable market situation, ie. favorable economic-socio-political environment,...

Threats

Unfavorable economic, socio-political environment, lack of state incentives and favorable loans, especially for business start-ups, strong competition in the planned activity, strong competition that quickly develops more innovative products.

You can download the current Rating via the link https://nbs.rs/sr/finansijsko_trziste/informacije-za- investitore-i-analiticare/rejtng_RS/. Attached is the latest rating rating from STANDARD & POOR'S, MOODY'S INVESTORS SERVICE and RATING FITCH. It is important if foreign investments or foreign investors are planned. More in the blog https://investasistent.com/investiciona-i-kreditna- sposobnost-investitora/

Note

An investment is eligible for realization if all indicators in the Financial Result have recommended values, if the SWOT analysis is realistic (more in the blog SWOT Analysis) and if the investment and creditworthiness is realistically assessed and accepted by a potential lender or co-investor (more in the blog Investment and Investor Creditworthiness). The key parameters on the basis of which it is concluded whether the investment is financially justified are: NPV (Net present value), which must be positive, and shows how much the investor will earn in the project life at current prices, IRR (internal rate of return) which is an indicator of interest invested capital, which in the basic variant must be at least 2 times higher than the discount rate, Discounted return on investment, which must be shorter than the life of the project, Average annual Net profit min 15-20% of average income. If the budget shows a loss on the Income Statement and / or illiquidity in the Financial Flow (often occurs in the first years of the project life if production is gradually established and / or due to the need to conquer the market, due to employee salaries, depreciation and due loan installments), and other above parameters are good, does not mean that you should give up the investment, but indicate that in those years it is necessary to invest additional external funds to maintain liquidity.

Disclaimer

We did not check the reliability of the input data (investment value, income and expenses, SWOT analysis), as well as investment and creditworthiness. Therefore, before starting the investment, all entered data should be checked again, especially the procurement and sales market.
